

A CRM APPLICATION FOR THE CHAI SHOP & CO

5. PROJECT DEVELOPMENT PHASE

5.1 Development Environment

The CRM Application for TheChaiShop&Co is developed on a Salesforce Developer Organization using Salesforce Lightning. The implementation uses custom objects, tabs, a Lightning app, global picklists, custom fields, relationships, page layouts, record types, validation rules, an email template, a scheduled flow, reports and dashboards.

5.2 Custom Objects

Object	Record Name	Purpose
Employer Account	Employer Account Name (Text)	Stores employee details of the shop such as contact, identity, designation and salary.
Customer Account	Customer Account Name (Text)	Stores customer details, orders, billing and birthday information.
Enterprise Account	Enterprise Account Name (Text)	Stores bulk and business customer details, orders and billing.

All three objects are created with Allow Reports, Allow Activities, Track Field History and Allow Search enabled.

5.3 Global Picklists

Picklist	Values
Gender	Male, Female, Others
Items	Platinum Tea Powder, Double Delight Tea Powder, Super Dust Tea Powder, Osmania Biscuits (Value Pack), Osmania Biscuits (Premium Pack), Dry Fruit Biscuits, Fruit Biscuits, Salt Biscuits, Multigrain Biscuits, Ragi Biscuits, Double Choco Chip Cookies, Butter Almond Cookies, Melting Moments Cookies, Honey Oats Cookies, Delight Box, Signature Box, Assorted Box
Payment Mode	Gpay, PhonePe, Paytm, Credit or Debit card, Cash
Type of Items	Tea powder, Cookies, Gift Hampers

5.6 Enterprise Account Object Fields

Field	Type / Details
Enterprise Name	Text (25), Required

Field	Type / Details
Phone Number	Phone, Required
Email ID	Email, Required
Address	Text (125)
Type of Items	Multi-Select Picklist using Type of Items global value set, Required
Products Purchased	Multi-Select Picklist using Items global value set, Required
Associated Employer	Lookup relationship to Employer Account
Order Quantity	Formula returning Number: counts the products selected in the order
Total Bill	Formula returning Number: adds the unit price of every selected product
Payment Mode	Picklist using Payment Mode global value set, Required

5.7 Tabs and Lightning App

Custom tabs are created for Employer Accounts, Customer Accounts and Enterprise Accounts. A Salesforce Lightning application named “TheChaiShop&Co” is configured with standard navigation for desktop and phone, and contains the Customer Accounts, Employer Accounts, Enterprise Accounts, Reports and Dashboards tabs. The application is assigned for use by the System Administrator.

5.8 Page Layouts and Record Types

Record Type	Page Layout	Purpose
Online Order	Online orders	Differentiates customer records created for online orders on the Customer Account object.
Walk-In Order	Walk-In orders	Differentiates customer records created for walk-in orders on the Customer Account object.

5.9 Validation Rules

Object	Rule	Purpose
Employer Account	Aadhar Number	Accepts only a 12-digit numeric value that does not start with 0.
Employer Account	PAN Number	Prevents blank values, leading 0 and special characters.
Employer Account	Phone Number	Accepts only a 10-digit numeric value with no spaces or symbols.
Customer Account	Phone Number	Accepts only a 10-digit numeric value with no spaces or symbols.
Enterprise Account	Phone Number	Accepts only a 10-digit numeric value with no spaces or symbols.

5.10 Email Template, Email Alert and Flow

- A classic text email template named “Birthday Offer Email” is created with the subject “Special Birthday Offer Inside!” and a birthday discount message using the customer’s First Name merge field.
- An email alert named “Happy Birthday email alert” is created on the Customer Account object using this template and sends to the Email ID field.
- A schedule-triggered flow named “Happy Birthday Email Flow” runs daily for Customer Accounts where Date of Birthday is today is true and Email ID is not blank.
- The flow runs the “Send Happy Birthday Email” action with the record Id and is then activated.

5.11 Reports and Dashboards

Name	Source Object	Grouping / Content
Customer Account Sales Report	Customer Accounts	Rows grouped by Record Type, with a chart.
Enterprise Account Sales Report	Enterprise Accounts	Rows grouped by Type of Items, with a chart.
Customer Vs Enterprise Sales (Dashboard)	Both reports	Displays the chart of each report as a dashboard widget.

5.12 Development Summary

The development phase converts the design into a working Salesforce CRM application with structured objects, fields, relationships, validation and automation. Formula fields calculate order quantity and total bill automatically, record types separate online and walk-in orders, and the scheduled flow sends birthday offers. Reports and dashboards provide the analytics layer needed for sales monitoring.
