

A CRM APPLICATION FOR THE CHAI SHOP & CO

1. BRAINSTORMING & IDEATION

1.1 Problem Identification

The Chai Shop & Co serves walk-in customers, takes online orders and supplies chai to enterprise clients. At present, customer details, order history and feedback are usually kept in order books, billing slips, phone contacts and separate spreadsheets. This can lead to lost or duplicate customer records, missed follow-ups, delayed order handling and no clear picture of sales. The project identifies the need for a centralized Customer Relationship Management (CRM) system that can organize customer, enterprise, order and sales information in one place.

1.2 Problem Statements

ID	Target User	Problem Statement
PS-1	Shop Owner / Manager	The Shop Owner wants to track daily sales and customer activity, but scattered order books and spreadsheets can produce delayed or inaccurate reports, making business decisions difficult.
PS-2	Walk-In Customer	The customer wants quick service and recognition as a regular, but without stored customer records the shop cannot remember preferences or offer loyalty benefits.
PS-3	Online Customer	The customer wants to place orders and receive confirmations easily, but manual order taking over calls or chats can cause missed or incorrect orders.
PS-4	Enterprise Client	The enterprise client wants regular bulk chai supply and clear billing, but without organized account records, order follow-ups and repeat orders may be missed.
PS-5	System Administrator	The Administrator wants to manage user access and protect customer data, but manual handling can create the risk of unauthorized access.

1.3 Target Users

- Shop Owner / Manager
- Walk-In Customers
- Online Customers
- Enterprise Clients
- System Administrators

1.4 Empathy Map

Empathy Area	CRM Understanding
Think & Feel	Users need accurate, timely and easily accessible customer and order information.
Hear	Users receive feedback, complaints and suggestions from customers and enterprise clients.
See	Users currently see order books, billing slips, phone contacts and spreadsheets holding customer information.

Empathy Area	CRM Understanding
Say & Do	Staff note down orders and customer details manually and try to remember regular customers.
Pain	Lost records, duplicate entries, missed follow-ups, delayed reports and no view of repeat customers.
Gain	Centralized customer data, automated emails, faster reporting and better customer relationships.

1.5 User Needs

- Simple entry and maintenance of customer and account records.
- Separate handling of online orders and walk-in orders.
- Accurate details of Customer, Employer and Enterprise accounts.
- Automatic email notifications and reminders to customers.
- Reports and dashboards for sales monitoring and quick decisions.
- Controlled access for different user roles.

1.6 Pain Points

- Manual paperwork and repeated data entry.
- Risk of incorrect, duplicate or missing customer records.
- Customer and order information scattered across books and files.
- No automatic reminders or follow-ups for customers.
- Delayed preparation of sales reports.
- Limited visibility into customer behaviour and repeat business.

1.7 Selected Idea

The selected idea is a Salesforce-based CRM Application for The Chai Shop & Co. The system centralizes customer, employer and enterprise account information on the Salesforce cloud platform. It provides custom objects, a Lightning App, record types for online and walk-in orders, validation rules, email templates and alerts, automated flows, and reports and dashboards for sales monitoring.

1.8 Objective of the Idea

The objective is to develop a centralized and user-friendly CRM solution that reduces manual work, improves data accuracy, separates and tracks online and walk-in orders, automates customer communication, supports role-based access and provides useful sales analytics for The Chai Shop & Co.

1.9 Expected Outcome

The proposed system is expected to provide organized digital customer records, better data accuracy, automated email communication, faster and clearer sales reporting, improved customer relationships and a reliable foundation for future growth such as loyalty programs and mobile ordering.
