

A CRM APPLICATION FOR THE CHAI SHOP & CO

2. REQUIREMENT ANALYSIS

2.1 Project Overview

Requirement analysis defines what the CRM Application for The Chai Shop & Co must provide and the quality characteristics it should maintain. The system is designed around Salesforce Lightning, custom objects, tabs, a Lightning App, record types, validation rules, email templates, flows, reports and dashboards.

2.2 Functional Requirements

ID	Requirement	Description
FR-1	User Authentication	Provide secure access to authorized users such as the shop owner, manager and staff.
FR-2	Account Management	Create, maintain and manage records for Customer, Employer and Enterprise accounts.
FR-3	Order Management	Capture orders using record types for Online Orders and Walk-In Orders with separate page layouts.
FR-4	Data Entry and Validation	Capture required information using custom fields and global picklists, and validate entered values using validation rules.
FR-5	Email Communication	Send automated emails to customers using email templates and email alerts.
FR-6	Process Automation	Run scheduled automation using a Schedule-Triggered Flow for reminders and follow-ups.
FR-7	Report Generation	Generate reports such as Customer Account Sales Report and Enterprise Account Sales Report.
FR-8	Dashboard Visualization	Display important sales and customer information using dashboards and visual analytics.
FR-9	User Role Management	Control access according to user roles, profiles and sharing configuration.

2.3 Non-Functional Requirements

Category	Requirement
Usability	Provide a simple Salesforce Lightning user interface with custom tabs and a dedicated Lightning App.
Security	Use profiles, roles and sharing controls for access management and protection of customer data.
Reliability	Use cloud storage and platform capabilities to reduce the risk of data loss.
Performance	Target report/query generation and page loading within approximately 3 seconds.
Availability	Provide cloud-based access for authorized users, including during peak business hours, weekends and late nights.
Scalability	Support growth in customers, orders, enterprise clients and future shop branches.

2.4 Data Flow Diagram (Logical Flow)

User → Salesforce Lightning UI → Customer/Employer/Enterprise Account Objects → Validation Rules → Order Record Types (Online / Walk-In) → Email Alerts and Flows → Reports → Dashboards.

2.5 Technology Stack

Layer	Technology
Frontend	Salesforce Lightning UI
Backend/Application Platform	Salesforce Platform
Database	Salesforce Cloud
Automation/Validation	Salesforce Validation Rules, Email Alerts and Flows
Analytics	Salesforce Reports and Dashboards

2.6 Main Data Entities

- Customer Account: stores customer identity, contact details and order information for regular chai customers.
- Employer Account: stores employer details and related contact information.
- Enterprise Account: stores details of enterprise clients who place bulk or regular chai orders.
- Orders (Online and Walk-In): captured using record types so that each order type has its own page layout and process.

2.7 Requirement Summary

The requirements establish a centralized, secure and cloud-based CRM with structured data management, validation, automation and analytics. These requirements guide the design and implementation phases.
